

High-Level Forum on Implementing the Sustainable Development Goals in IDB Member Countries

In September 2015, the United Nations General Assembly in New York formally adopted the 2030 Sustainable Development Agenda, which over the next 15 years aims to end poverty, reduce inequality and improve access to education and healthcare. Translating this ambitious and complex agenda into actionable plans and generating monitoring mechanisms are key to implementing the SDGs.

Participants in this event will discuss the challenges of implementing the SDGs at country level and the role of the IDB Group. The session will focus on:

- The experiences of member countries in implementing the Millennium Development Goals (MDGs)
- Lessons learned and best practices from implementing the MDGs that can be leveraged on to the SDGs
- Implementation challenges for the SDGs
- Identifying innovative mechanisms for financing the 2030 Agenda for Sustainable Development, including the role of IDB Group and other development partners
- Identifying monitoring mechanisms to track implementation of the SDG targets
