

## **Water Crisis or Water Management Crisis: *Integrated Water Resources Management (IWRM)***

---

The seminar will bring key stakeholders and experts involved in water resources management to discuss past and current challenges of Integrated Water Resources Management (IWRM) planning and implementation. It will highlight IDB's and the International Centre for Bio-saline Agriculture (ICBA) contribution and expertise in water sector as well as experience of the Government of Indonesia and other member countries. The lessons learnt in the water sector in the IDB member countries in terms of the challenges facing water resources planning and implementation will be shared among the participants. The discussion will also take into account the advantages and contribution of IWRM to development experience in planning and prioritizing the investments in water sector as well as other cross-cutting sectors that demands water resources. The Seminar will also shed light on how a revitalized agenda for water resources may fulfil the demands of SDGs implementation as well as will take stock of the IWRM approach being applied in the member countries and the challenges being faced during implementation.
